Multiplexing Solution for Proteins and Nucleic Acids

# FLEXMAP 3D® (RUO)

## Bridging the Proteome and the Genome

The FLEXMAP 3D®, a flow-based reader, is the most advanced and versatile multiplexing platform from Luminex. Fast read time, compatibility with both 96- and 384-well plates and ease of integration with front-end automation systems make the FLEXMAP 3D the platform of choice for high-throughput applications. The platform uses both magnetic and non-magnetic microspheres and is capable of simultaneously measuring up to 500 genes or proteins from a small sample volume. Automated startup, shutdown, and maintenance routines make the FLEXMAP 3D easy to use and maintain.
