Cultrex Purified Extracellular Matrix Proteins

Cultrex purified extracellular matrix (ECM) proteins provide a defined substrate for cell adhesion in culture. To accommodate a variety of different cell models, a full range of ECM component proteins have been developed

including Laminin I, Collagen I, Collagen IV, Fibronectin, and Vitronectin. These include purified proteins that have been qualified for 3-D or stem cell cultures, as well as poly-L-lysine, poly-D-lysine and poly-L-ornithine.
